SUMMARY

Software Engineer with 1+ year of experience at JPMorgan Chase (via Cognizant), building reliable, production-ready Java/Spring Boot microservices for a large card-servicing platform. Proficient in Java, Spring Boot, REST API design, Spring Batch, AWS (ECS, Lambda, Glue, SQS) and Terraform, with experience in event-driven data pipelines, legacy modernization and CI/CD. Experienced in owning work end to end across development, testing, deployment and production support, backed by a strong DSA foundation and an IEEE publication.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, SQL, C++
Backend: Spring Boot, Spring MVC, Spring Batch, REST APIs, OpenAPI, JPA, Hibernate, JDBC, Microservices, API Integration
Frontend: React.js, HTML5, CSS3
Databases: MySQL, Aurora PostgreSQL
AWS & DevOps: ECS, S3, Lambda, Glue, SQS, SSM, CloudWatch, Terraform, Jenkins, Spinnaker, CI/CD, Blue-Green Deployments
Testing: JUnit, Mockito, Cucumber, Pact, WireMock, Unit Testing, API Testing, Component Testing, Swagger, Bruno
Core Concepts: Data Structures & Algorithms, OOP, DBMS, Git, Agile/Scrum, Production Troubleshooting

PROFESSIONAL EXPERIENCE

Cognizant Technology Solutions | Software Engineer | Client: JPMorgan Chase & Co. (CCB Card Services)
June 2025 – Present | *Hyderabad, India*

Project 1: Payment Plan APIs & Customer Experience Modernization | *Java, Spring Boot, REST APIs, React, TypeScript, JUnit, Pact*

- Developed and integrated 35+ Java/Spring Boot REST APIs for payment plans, offers, enrollment, and account servicing, working across controller, service, and data-access layers with databases and downstream services.
- Configured and validated API gateway routes (authentication, rate/policy rules, request transformation) for end-to-end connectivity from the gateway through to the payment-plan services.
- Modernized a collections re-enrollment workflow by replacing legacy C++/EJB calls with Java REST services (agency lookup read API and re-enrollment write API) consumed by a React/TypeScript UI.
- Wrote unit, component, and contract tests (JUnit, Mockito, Cucumber, Pact, WireMock, Swagger, Bruno) covering valid, invalid, and edge cases, including retry-selection logic of an asynchronous store-and-forward enrollment service.
- Built React.js features for customer payment journeys (Make a Payment, ReAge, STP, BLP) and fixed an accessibility defect on a customer-facing offers page.

Project 2: Data Processing & Cloud Platform Engineering | *Java, Spring Batch, AWS (ECS, Glue, Lambda, SQS), Terraform, Aurora PostgreSQL*

- Built Spring Batch jobs that run daily, configured per environment (DEV, UAT, PROD, ARS-UAT, ARS-QA, ARS-PERF, CERT) through EAC deployment scripts.
- Worked on an event-driven AWS data pipeline (S3 notification, Lambda, Glue, Spring Batch pre-processor on Aurora PostgreSQL, SQS partitions) and acceptance-tested the Lambda trigger with valid, edge, and malformed events.
- Migrated a customer-data processor to a NextGen ECS platform using separate DEV and UAT Terraform workspaces, with plan review, health checks, and IAM/secret validation, keeping the legacy deployment until cutover.
- Supported application onboarding and deployment across DEV, CERT, QA, UAT, PERF, and Production, including environment configuration, health validation, and rollback readiness.
- Investigated and resolved 10+ production and environment issues involving SQS, ECS, and infrastructure changes, using CloudWatch, Splunk, Dynatrace, and Argus to support root-cause analysis.
- Delivered security and platform upgrades, including sidecar CVE remediation, framework and infrastructure upgrades, ARM64/Graviton validation, and Splunk server migration to AWS; onboarded services to Splunk, Argus, and Dynatrace.

Cognizant Technology Solutions | Java Full Stack Development Intern
January 2025 – April 2025

- Developed Java/Spring Boot REST APIs using Hibernate/JPA and MySQL for full-stack application workflows.
- Built React.js components and integrated frontend functionality with backend APIs.
- Worked on authentication, database operations, API integration, debugging, and application validation.

PERSONAL PROJECTS

AI-Powered Natural Language SQL Analytics Platform | *Java, Spring Boot, Spring JDBC, H2, REST APIs, Llama 3, Groq, React*

- Independently implemented a Java/Spring Boot platform that converts natural-language questions into SQL queries for structured dataset analysis.
- Developed REST APIs for query processing, LLM interaction, SQL validation, and read-only database execution using Llama 3 through Groq.
- Implemented CSV ingestion, data preprocessing, table creation, and dataset joining using Spring-based backend components and H2.
- Built a React/Vite interface for submitting natural-language questions and displaying query results.

Fake Social Media Profile Detection | *Python, Machine Learning, Web Development*

- Developed a machine-learning-based system to identify potentially fraudulent Instagram/social-media profiles using profile characteristics and user-related data.
- Collected and analyzed profile attributes such as followers, following, bio information, external URL presence, and account-age-related data.
- Engineered relevant features and applied classification techniques to distinguish potentially fake profiles from genuine accounts.
- Developed supporting web interfaces for profile verification and prediction-result visualization, gaining early hands-on experience in software development, data processing, and cybersecurity.

EDUCATION

Prasad V Potluri Siddhartha Institute of Technology
B.Tech (Honors), Computer Science & Engineering | 2021 – 2025 | CGPA: 9.1/10

ACHIEVEMENTS & PUBLICATIONS

- Smart India Hackathon 2023 Finalist.
- Authored and presented IEEE conference paper: *Secure Attendance System Leveraging Machine Learning and Blockchain*.
- Selected participant, ACM Summer School – Generative AI for Text, IIT Gandhinagar.
